1 Compatibility

The Firmware is compatible with:

- fw_GT-3-S_868_v001_020.gts:
 - LOG GT-3-S-868,
 - LOG GT-3-1-868,
 - LOG GSM-3-2-868
- fw_GT-3-S_913_v001_020.gts:
 - LOG GT-3-S-913,
 - LOG GT-3-1-913,
 - LOG GSM-3-M2
- fw_GT-3-S_916_v001_020.gts:
 - LOG GT-3-S-916-IL,
 - LOG GT-3-S-916-TEL,
 - LOG GT-3-1-916-AUS,
 - LOG GSM-3-2-916-IL,
 - LOG GSM-3-2-916-AUS

2 How to update

SebaKMT makes improved versions of the firmware available in the download area of www.sebakmt.com on a regular basis. We recommend that you keep the firmware of all devices current at all times. In order to determine which firmware version is currently installed on a device, you can read the device's programming.

To update the firmware of one or more devices, proceed as follows:

- Open the SebaDataView-3 software.
- Click the water drop symbol  on the top left of the window and select the option **Firmware Update** in the window that opens.

Result: The following window opens.

- In the drop-down list in the top left, select the type of devices whose firmware is to be updated. **Choose LOG GT-3-1, LOG GT-3-S or LOG GSM-3-2**
- Type in the IDs of the devices you want to update. Devices have to be of the type you have chosen in drop down menu [step before].

- Locate update file on your PC:

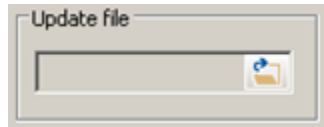

Datei:
Info_GTdevice_v001_020.docx

Info LOG GT-3-S V1.020	Page 4 of 6

- Click **OK** to start the firmware update.

Result: The update file is transferred to the devices and installed there. A bar under the list on the right shows the progress of this process. After the file is installed, each device restarts automatically.

The IDs of the successfully updated devices switch from the left to the right side on the screen. As soon as the firmware update is successfully completed for all devices, a corresponding message appears in the update window.

3 Change log

- Version 1.010
 - Improved communication with loggers
 - Improved GSM stability
 - Password protection for devices
 - Data encryption of user specific data
 - Further bug fixes
- Version 1.011
 - Bug fixes
- Version 1.012
 - Bug fixes
- Version 1.013
 - Blocked SIM can be unlocked with PUK
 - Email with HTML support (better design)
 - Text changed at „missing Devices“ messages
 - “Active” LED shows state. (Blue LED: device is in init state. Green LED: device is installed and red LED: battery is below 90% capacity)
 - Activation of radio communication with magnet for 1 minute, when device is not in “radio on” mode
 - Support update via FTP
 - Further bug fixes
- Version 1.014
 - Summer- / wintertime synchronization
 - Synchronizes to GPS or GSM after reset, if transmitter had been installed
 - Further bug fixes
- Version 1.015
 - Connecting to GPRS more robust. (APN settings)
 - GSM synchronization during programming
 - If synchronization during programming has an error, there is an info that APN should be checked
 - Data email text changed
 - Data transmission more robust. If there is a GSM transmission problem on one day, data will be transmitted on next day. (up to 14 days old data)
 - GSM check will transmit data, that couldn't be transmitted in the session before (up to 14 days old data)
 - Further bug fixes

	Revision 2021/06
Info LOG GT-3-S V1.020	Page 6 of 6

- Version 1.016
 - Spreading GSM transmission time to avoid GSM network overload
 - Improved reinstallation management
 - Improved GSM time synchronization
 - Further bug fixes
- Version 1.017
 - Testversion
- Version 1.018
 - Production test with net simulator
 - Switch on delay to prevent out switch on after battery insertion
 - Force default bands for SIM7500
 - Larger FTPS Login Timeout
 - Further bug fixes
- Version 1.019
 - Bugfix: FTPS Upload US Version
- Version 1.020
 - Switching off problem with LOG GSM-3-2 solved
 - Bug in LOG P-3-mini/-1 handling solved
 - Registering to mobile net is more stable
